

State of the Borough Report

Overview and Scrutiny Committee

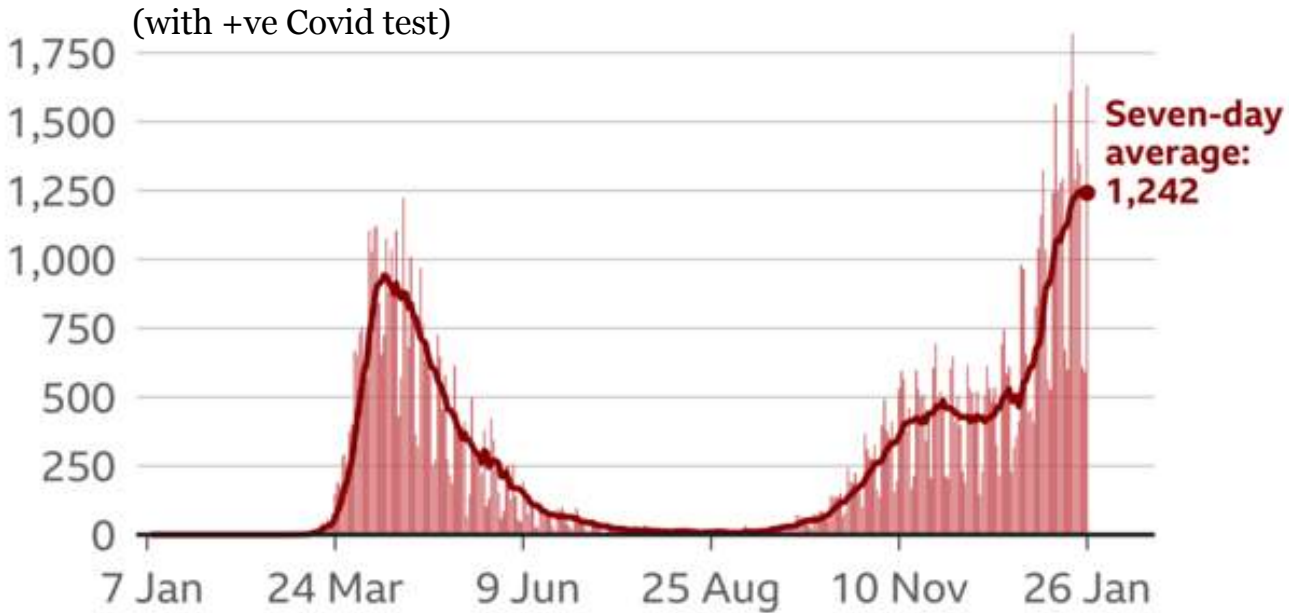

26 January 2021

Cllr Elizabeth Campbell, Leader of the Council
Barry Quirk, Chief Executive

- **Tragedy of past year with 100,000 people dying with positive Covid-19 test**
- The 2021 State of the Borough report will be published later this week. It aims to provide Members, staff key partners and stakeholders with access to data they may need in order to inform policy development, service delivery and decision-making.
- It includes headline level data about place, population and local economy. It draws on a wide range of data to give a longer-term view RBKC.
- For tonight's discussion, we have put together a more short-term picture, using data that tells us what is happening in there here and now – particularly in relation to the impact of Covid-19.

100,000 deaths

UK daily reported deaths with Covid-19

Covid-19 deaths in London hospitals over past 5 weeks

- In past 47 weeks, 100,000 people have died (with a +ve Covid test)
- Almost 21,000 have died in England's hospitals over the past five weeks (since the week ending 28 December)
- In London's hospitals a total of 4,381 have died

the current picture of Covid-19 locally

case rates per 100,000 people

Local authority	Case rate, % change from last week	Local authority	Case rate, % change from last week
Hounslow	785.2	Lawisham	538.8
Ealing	771.2	Havering	536.3
Brant	751.1	Bexley	535.3
Barking and Dagenham	736.0	Merton	534.0
Newham	714.7	Hackney	521.1
Redbridge	650.7	Southwark	498.4
Croydon	632.0	Hammersmith and Fulham	459.1
Greenwich	628.6	Bromley	447.4
Hillingdon	616.5	Wandsworth	442.9
Waltham Forest	603.3	Islington	407.5
Harrow	602.8	Kingston upon Thames	394.9
Enfield	580.3	Westminster	363.9
Lambeth	566.5	Camden	352.9
Sutton	555.9	Kensington and Chelsea	339.5
Barnet	553.7	Richmond upon Thames	292.4
Haringey	548.7	City of London	246.9
Tower Hamlets	544.4		

- **90,270** people tested positive in London in the first week of 2021, a rate of 1,007 cases per 100,000 people.
- **10,110** new people tested positive in London on 11 January and there were **7,799** COVID-19 patients in London hospitals (this compares with **6,733** patients on 04 January 2021).
- The number of Covid-19 deaths in London has exceeded **10,000** in hospitals, with an additional 30% of deaths in care homes and other locations.
- From 8th December 2020 to 24th January 2021 **612,045** people have received the first dose of the vaccine in London; **55,256** people have already received the second dose. Nationally, these figures are **5,727,693** and **441,684** respectively.

the impact of the Covid-19 pandemic, so far

Covid-19 pandemic and Brexit likely to have negative impact on the population of the borough, in line with recent London-wide projections

Sources: PwC analysis, ONS, Public Health England, London Assembly

Notes: This includes excess death projections for 2021 based on data from Public Health England and the Institute for Health Metrics and Evaluation, University of Washington.

- Latest housing-based projections indicate that by 2030 RBKC's population will remain at current levels of **153,000 to 155,000**.
- Before the pandemic London's population was expected to grow by 4.3% (Outer London, 4.8%; Inner London, 3.7%)
- London's population is now expected to decline for the first time in 35 years, due to the Covid-19 pandemic and Brexit. In an August 2020 survey **4.5%** of Londoners (416,000 people) responded that they would definitely move out of the city within the next year.

Negative net migration?

K&C residents ...

20% EU passports (highest in London)
61% UK passports (lowest in England)

the borough's two main industries have been heavily impacted by successive lockdowns

Retail

Retail is the main industry within the borough, employing 15.5% of people. This makes it the greatest agglomeration of retail jobs in any borough. Retail has been one of the most impacted industries during the pandemic, hence, playing a significant role in the economic recession.

Accommodation & Food

Accommodation and food services is the second most important industry employing 14.8%. It is the biggest cluster of jobs within the industry across London. It has been heavily impacted by COVID-19 and there has been the largest proportion of its workers on furlough.

NOTE: Business demographics ons.gov.uk

10% of employees in RBKC were furloughed for 6 months during the pandemic

- By the end of September 2020, 6,000 workers were furloughed, under the Coronavirus Job Retention Scheme (CJRS) furlough scheme. The take up rate in RBKC matches the London average at approximately 10% of the eligible population being furloughed.
- This unprecedented lengthy furlough scheme, covered 8.9 million workers in the UK at its peak and about 15,500 in RBKC in July. Workers in retail and accommodation and food services, two main industries in the borough, were affected the most.

FURLOUGH CLAIMS IN UK

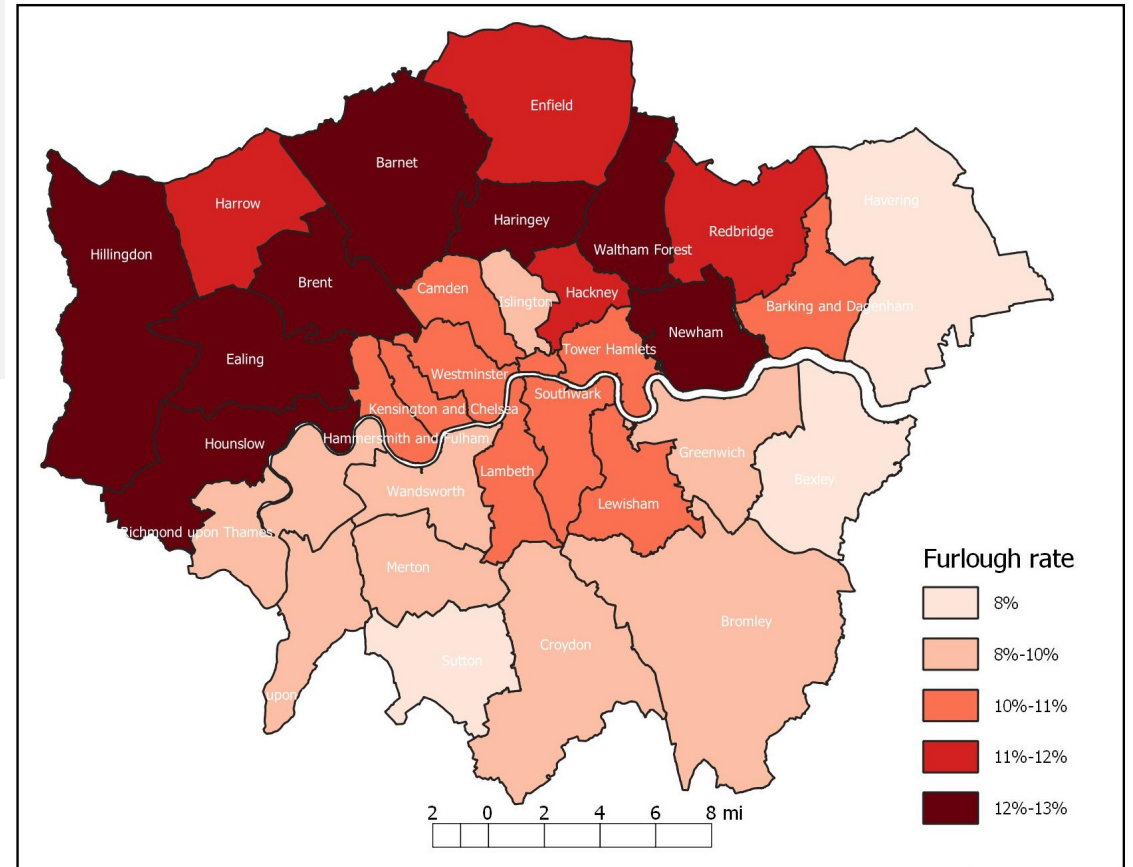

Wholesale and retail:
£7.4bn

Accommodation and food services:
£6.2bn

From March to November 2020, Universal Credit claimants in RBKC increased by 120%

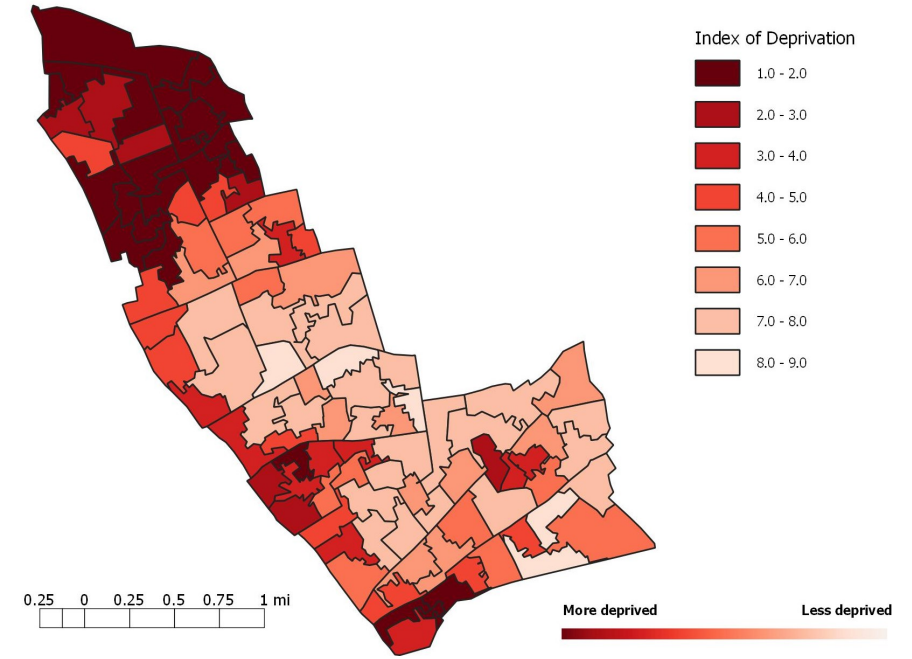

UC CLAIMS IN MARCH 2020

UC CLAIMS IN OCTOBER 2020

INDEX OF MULTIPLE DEPRIVATION

The restrictions on businesses and households that were put in place from the beginning of the pandemic led to many people not being able to work or not being able to earn as much as they were previously. As a result, the claims for Universal Credit increased significantly. There has been an increase of 120% in the total number of UC claimants from 4,869 in March to 10,717 in November 2020.

There is a clear pattern suggesting that the number of total Universal Credit claims is significantly higher in the most deprived wards. These are Dalgarno, St Helen's, Golborne, Notting Dale and Colville wards. Golborne, Colville and Notting Dale had similar levels in March, but have had different experiences during the pandemic. Golborne now has the highest claimants at 1,059.

NOTE: DWP, stat-xplore.dwp.gov.uk. IMD: www.gov.uk

12% of residents who are claiming UC are between 16-24 years old

YOUNG RESIDENTS CLAIMING UC

% of people claiming UC who are between 16 - 24

- The number of young residents claiming UC has increased by **167%** from the beginning of the pandemic (from a total of 479 young claimants in March to **1,279** in November). This aligns with predictions that young people are likely to be disproportionately affected by the pandemic in terms of job prospects and economic opportunity.
- The proportion of total UC claimants in RBKC who are “young” (i.e. between 16 and 24) have also increase in the last year, however, it is lower than the equivalent for London and Great Britain. This could be due to a different pattern of population age groups distribution.

accommodated 120 rough sleepers during lockdown in 2020

Homelessness prevention outcomes

Homelessness relief outcomes

- Last year, all of the **120** rough sleepers were accommodated during lockdown.
- In RBKC, in November 2020, successful homeless prevention cases were the highest out of all of 2020, and over two times higher compared to November 2019.

In 2020, RBKC's crime level dropped by 29%, compared to 14% for London

Crime prevalence in 2020

44% drop in **theft** in 2020;
for London it's **32%** and for Inner London **37%**
But shops closed!

20% of all theft locally is shoplifting,
50% is “other” theft, in line with London

7% drop in **violence** against the person;
for London it's **1%** and for Inner London **5%**

1 homicide in 2020,
compared to **5** in 2019

21% drop in **drug offences**;
increase of **14%** for London and **4%** in Inner London

NOTE: London Fire Brigade [web-site](#) and [London Datastore](#). Metropolitan Police, Recorded Crime: [Geographical Breakdown](#). Other crimes include Public Order Offences, Drug Offences, Arson and Criminal Damage, Robbery, Sexual Offences, Miscellaneous Crime Against Society, Possession of Weapons.

Commuting patterns have changed significantly during the Covid-19 pandemic, reaching a record low in April 2020

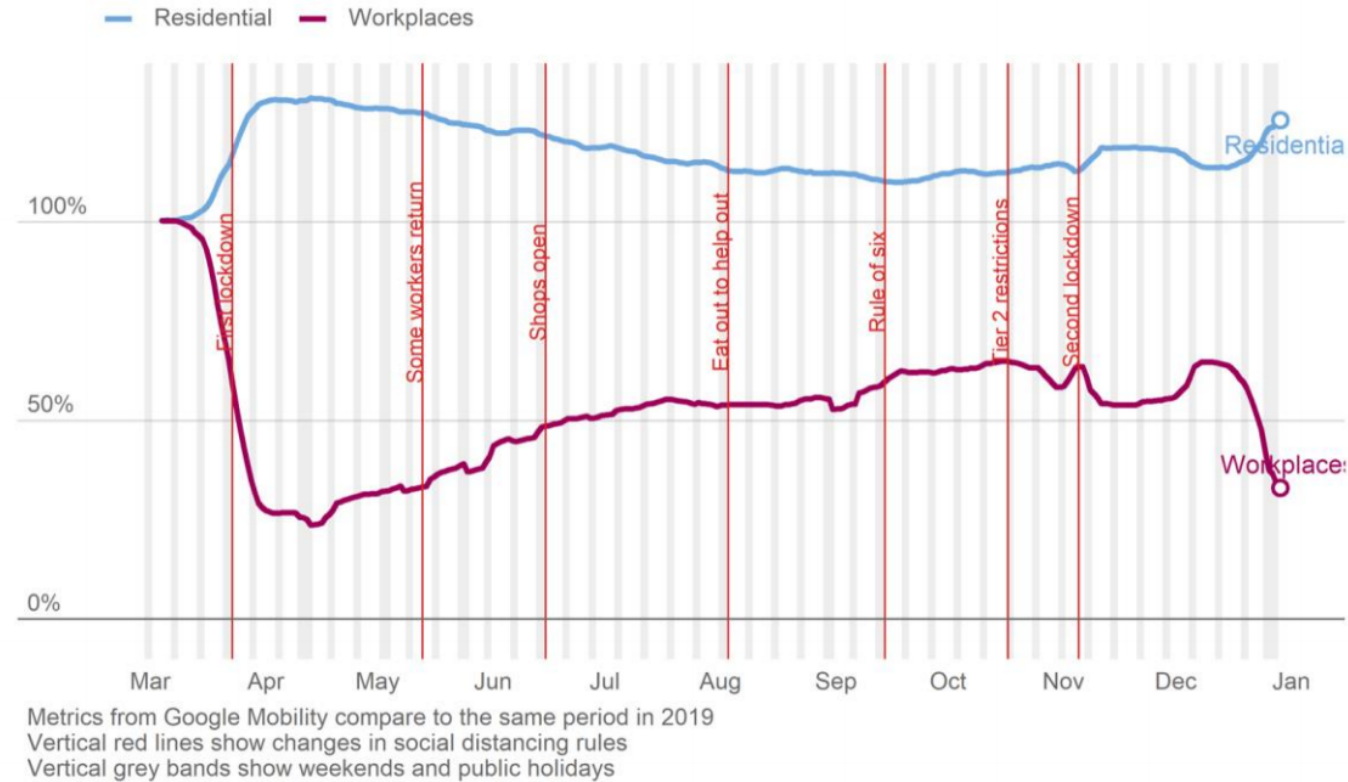

% CHANGE FROM BASE* IN COMMUTING BY PURPOSE

*The baseline day is the median value from the 5-week period Jan 3 – Feb 6, 2020.

Working from home in London

Google activity metrics compared to baseline (7 day rolling mean average)

The trend for London is quite similar to what we're seeing in RBKC; more people working from home and hence less people commuting to their workplaces.

The beginning of the pandemic saw a drop of **40% in workplace commuters** in RBKC, reaching a record low of almost 80% less commuters, compared to pre-pandemic figures. With most of workers continuing to work remotely, this figure varied between -45% to -50% fewer commuters on average, since August 2020.

Retail and recreation (along with transport) has seen the greatest impact on commuters. With most of the high street retail and recreational centres being closed for the greatest part of 2020, there's been on **average a decrease between -90 to -40%**.

With most of retail and hospitality closed, **parks** have been particularly popular in 2020, reaching a **20% increase on average during summer**, decreasing by -20% compared to the base during winter.

Commuting to **buy groceries and medicines**, as anticipated, has been affected the least, compared to other commuting purposes. A drop of 20% on average throughout the year is expected since **online grocery shopping has reached an all-time high** during the pandemic.

Being constrained to **stay at home** for the greatest part of the year, 'residential' commuting has recorded an increase of about 20%, compared to the beginning of 2020.

When all commuting trips decrease significantly, this can only mean one thing: **a great demand shock for transportation. Trips to transit stations in RBKC in winter were 60% lower than trips in January of the same year.**

air quality improvements

reduced NO₂ levels from changed travel patterns

NO₂ LEVELS, 12-MONTH MOVING AVERAGE

In September 2020, NO₂ levels in three out of five monitoring sites experienced decreases by 15-25%, compared to September 2019. The 12-month moving average for all sites highlights a **consistent reduction in NO₂ over five months**, achieving below the target levels.

a green lining?
